

Feedback Guide

Use the categories below to provide feedback on other team's ideas and design solutions. Remember to give constructive feedback that is respectful and includes specific ideas for growth, instead of general praise or criticism.

I hear/see...

What do you observe? How do their ideas/solution design make you feel or think? Does it motivate you to action?

I want more of...

What do you want to see expanded or enhanced? What worked well and compelled you to think or act a certain way?

I wonder...

What questions do you still have? What could strengthen the solution? How could it more specifically address the environmental health issue?
